- **Multi Merchant - Government**

- Single Terminal set up with multiple "Merchants".
- Facilitates settlements directly to the accounts of multiple Government Departments, on whose behalf the tax/revenue was collected. Example: NHT, PAYE, NIS, Education, Heart, etc.

Wireless Convenience for your POS Needs

Wireless payment is the fastest growing segment in the POS industry, offering entry to new vertical markets, new merchants and new ways to increase revenue. Wireless communications not only provides the convenience to accept payment directly at the point of purchase, it also provides the means to accept card transactions in areas that lack the infrastructure required for wired transactions. Global technological advancements have driven down costs associated with transferring data wirelessly, making it an ideal means for merchants to accept card transactions

Hypercom has created a full Mobile Solution that makes it easy for any company to offer wireless payment solutions. This solution combines Hypercom's point of sale terminal devices, Mobile Network services and Gateway to provide Hypercom customers with a one-stop shop offering. All this, while meeting today's most stringent industry standards for wireless security, Hypercom is your Total Solutions, Total Security provider
